SUMMARY

Master's candidate in Computer Science & Information Systems (Dec 2025, Saginaw Valley State University) with professional experience in backend and cloud-native development. Skilled in Go, Java, Python, Docker, Kubernetes, AWS, and microservices architecture. Experienced in designing RESTful/gRPC APIs, automating CI/CD pipelines, and optimizing distributed systems for scalability and reliability. Seeking a full-time Backend or Software Engineer role to build secure, high-performance infrastructure and software solutions.

EDUCATION

Saginaw Valley State University, Michigan, USA

Jan. 2024 - Dec. 2025

Master of Science in Computer Science & Information Systems (MS-CSIS)

Pokhara University, Cosmos College, Nepal

Sep. 2017 - Aug. 2022

Bachelor of Engineering in Computer Engineering (BCE)

Cumulative GPA: 3.71 / 4.00

WORK EXPERIENCE

Backend Developer | Scodus Innovations Pvt. Ltd - Kathmandu, Nepal

Apr. 2022 - Nov. 2023

- Engineered microservices using Go and gRPC to streamline inter-service communication, cutting average API latency by ~40%, and scheduled recurring background jobs with CronJob for automated maintenance tasks.
- Automated build, testing, and deployment workflows through CI/CD pipelines, integrating with containerized applications using Docker, which reduced manual intervention and improved deployment frequency by ~60%.
- Strengthened backend infrastructure by implementing robust authentication and authorization, optimizing database queries and schema design, and improving data integrity and system uptime across production environments.

Java Developer | IshaniTech - Lalitpur, Nepal

Jan. 2021 - Mar. 2022

- Built and maintained Spring Boot/MVC applications integrating RESTful APIs and relational databases to enhance performance and scalability, facilitating a 40% reduction in application response time under peak loads.
- Optimized SQL queries and Hibernate ORM mappings, improving query speed by ~35% and overall application responsiveness, and collaborated with cross-functional teams in an Agile development environment.
- Conducted code reviews, optimized application performance, and implemented testing frameworks like JUnit and TestNG to ensure high-quality code and comprehensive test coverage.

TECHNICAL SKILLS

Languages: Go, Java, Python, C, SQL (MySQL, PostgreSQL, NoSQL)

Frameworks & Technologies: Gin, Spring / Spring Boot, Django, gRPC, Microservices, RESTful APIs

Cloud & DevOps: AWS (ECS, S3, Lambda), Google Cloud, Docker, Kubernetes, CI/CD Pipelines

Tools & Platforms: GitHub, Linux, Postman, VS Code, Agile / Scrum

PERSONAL PROJECTS

Transaction Centralization – Flutter, Go, GORM, MySQL, JWT – *Personal Side Project* – 2021

- Built a secure mobile app aggregating transactions from mobile banking, PSPs, and e-commerce platforms into one dashboard for real-time expense tracking.
- Developed a Go backend with JWT authentication, encrypted data storage, and REST APIs; implemented a Flutter frontend for seamless cross-platform usability.

Smart To-Do List – Python, Django, SQLite, Bootstrap, JavaScript – *Academic Project* – 2025

- Created a task-management web app supporting authentication, CRUD, sorting, and user profile updates.
- Added email reminders via Gmail SMTP, responsive Bootstrap UI, and a light/dark mode toggle to improve productivity and accessibility.

Chat System – Go, PostgreSQL, Docker, WebSocket – *Personal Side Project* – 2023

- Developed a secure 1-on-1 messaging platform with real-time delivery acknowledgments and message editing/deletion features.
- Deployed via Docker containers and used WebSockets for reliable, low-latency message exchange.

Web-Scraping System – Go, PostgreSQL, Docker, Gin, GORM, JWT – *Personal Side Project* – 2022

- Implemented a web app that lets authenticated users scrape multiple websites, store data in PostgreSQL, and query results by URL/date.
- Orchestrated containerized deployment pipeline with Docker, increasing application uptime to 99.9% and slashing average scrape time by 35% via optimized resource allocation; sole engineer working on database.
