SUMMARY

Backend & Cloud Engineer with 3 years of experience building scalable microservices, APIs, and cloud-native systems using Go, Java, AWS, Docker, and Kubernetes. Strong background in distributed systems, CI/CD automation, and database optimization. Currently completing an MS in Computer Science (Dec 2025). Seeking full-time Backend/Software Engineer roles.

WORK EXPERIENCE

Backend Developer | Scodus Innovations Pvt. Ltd - Kathmandu, Nepal

Apr. 2022 - Nov. 2023

- Built microservices using Go and gRPC, reducing API latency by **40%**.
- Designed and automated CI/CD pipelines integrated with Docker, raising deployment frequency by **60%**.
- Implemented asynchronous communication using RabbitMQ and scheduled background jobs with CronJob to improve system scalability and reliability.
- Improved backend reliability by optimizing database queries, schema design, and authentication/authorization workflows.

Java Developer | IshaniTech - Lalitpur, Nepal

Jan. 2021 - Mar. 2022

- Developed and maintained Spring Boot applications with RESTful APIs, improving response times by **40%** under peak load.
- Optimized SQL queries and Hibernate ORM mappings, achieving a **35%** increase in query speed.
- Conducted code reviews, improved performance, and implemented testing frameworks such as JUnit and TestNG in an Agile environment.

EDUCATION

Saginaw Valley State University, Michigan, USA

Jan. 2024 - Dec. 2025

Master of Science in Computer Science & Information Systems (MS-CSIS)

Pokhara University, Cosmos College, Nepal

Sep. 2017 - Aug. 2022

Bachelor of Engineering in Computer Engineering (BCE)

Cumulative GPA: 3.71 / 4.00

TECHNICAL SKILLS

Languages: Go, Java, Python, SQL

Backend Frameworks: Gin, Spring Boot, Django, gRPC, REST APIs, Microservices, RabbitMQ

Cloud & DevOps: AWS (ECS, S3, Lambda), Google Cloud, Docker, Kubernetes, CI/CD Pipelines

Databases: PostgreSQL, MySQL, SQLite, NoSQL

Tools & Platforms: GitHub, Linux, Postman, VS Code, Agile/Scrum

PERSONAL PROJECTS

Transaction Centralization – Flutter, Go, GORM, MySQL, JWT – *Personal Side Project* – 2021

- Cross-platform mobile app aggregating financial transactions across banking, PSPs, and e-commerce platforms into a unified dashboard.

Smart To-Do List – Python, Django, SQLite, Bootstrap, JavaScript – *Academic Project* – 2025

- Task-management web app with user authentication, CRUD operations, sorting, profile updates, email reminders (SMTP), and responsive UI with light/dark mode.

Chat System – Go, PostgreSQL, Docker, WebSocket – *Personal Side Project* – 2023

- Real-time 1-on-1 messaging platform supporting delivery receipts, message editing/deletion, and low-latency WebSocket communication deployed in Docker containers.

Web-Scraping System – Go, PostgreSQL, Docker, Gin, GORM, JWT – *Personal Side Project* – 2022

- Containerized scraping platform enabling authenticated users to scrape websites, store/query data, and achieve **99.9% uptime** with **35% faster scrape times** via optimized resource usage.
